MYTH

FACT

I don't have time to treat my varicose veins.

VIA Vein Center uses state-of-the-art, non-surgical procedures, often taking less than an hour.

It will be too painful.

Procedures are virtually painless and offer quick recovery time.

Vein treatment is a complex and invasive surgery.

Only local anesthesia is required for treatment. You'll be able to resume normal activities within 24 hours.

My insurance company won't cover vein treatments.

More than 90% of varicose vein treatments are covered by insurance, including Medicare.

Identify varicose veins:

- Ropey, bulging veins
- Pain and leg swelling at the end of the day
- Clusters of spider veins around the ankles

VIA Vein Center's team of vascular physicians is the most experienced in the region in the diagnosis and minimally invasive treatment of venous disease, providing patient-focused consultations and treatments.

Call or go online today to schedule your vein screening with the experts at VIA Vein Center. Now is the time!
